Hi Helder,

```
IDL> !VERSION
```

```
{  
  ARCH: "x86_64",  
  OS: "linux",  
  OS_FAMILY: "unix",  
  OS_NAME: "linux",  
  RELEASE: "8.3",  
  BUILD_DATE: "Nov 15 2013",  
  MEMORY_BITS: 64,  
  FILE_OFFSET_BITS: 64  
}
```

```
IDL> a = dictionary()
```

```
IDL> a['item'] = 0l
```

```
IDL> a.item++
```

```
IDL> a
```

```
{  
  "item": 0  
}
```

```
IDL> a['item']++
```

```
% Type conversion error: Unable to convert given STRING to Long64.
```

```
% Detected at: $MAIN$
```

```
% Object reference expression not allowed in this context: A.
```

```
% Execution halted at: $MAIN$
```

Is this supposed to work in IDL 8.4 or in Windows?

Fabien
