Hi Fabien,

sorry I didn't specify the !Version:

```
IDL> !VERSION  
{  
    "ARCH": "x86_64",  
    "OS": "Win32",  
    "OS_FAMILY": "Windows",  
    "OS_NAME": "MicrosoftWindows",  
    "RELEASE": "8.4",  
    "BUILD_DATE": "Sep272014",
```

```
"MEMORY_BITS": 64,  
"FILE_OFFSET_BITS": 64  
}
```

This sequence of commands crashes IDL:

```
IDL> a = dictionary()  
IDL> a['item'] = 0  
IDL> a.item++
```

Whereas this works:

```
IDL> a = dictionary()  
IDL> a['item'] = 0  
IDL> a['item']++  
IDL> a  
{  
    "item": 1  
}
```

I never tried this in 8.3 and I've uninstalled 8.3 already.

Cheers,  
Helder
