Hi, i am having some problems with the write_png procedure.

I am trying to save a large image as a png. I am currently displaying the image using "tvscf" and then write_png.

However, this image has more rows than the size of my screen and when I write_png, it only writes the rows which can be seen on the screen, hence my image has a missing portion.

I have tried using "device, retain=2", but this has not helped this problem.

Thanks!
