:   s = SIZE(originalImage)
:   tiffImage = Make_Array(s(1), s(2), /Byte, Value=255) ; Make it white
:   tiffImage(roi) = originalImage(roi)
:   TVLCT, r, g, b, /Get
:   Tiff_Write, 'myfile.tif', tiffImage, Red=r, Green=g, Blue=b

Thanks very much for the tip David, I am attempting to do something similar.
I made a plain white Tiff file using:

tiffImage=Make_Array(500,350,/Byte,Value=255)
TVLCT,r,g,b,/Get
Tiff_Write, 'white.tif', tiffImage, Red=r, Green=g, Blue=b

Then I wanted to read in this file through ENVI, and then using ENVI load in
the *.roi file on top of the white tif file. However, when I load "white.tif"
with ENVI the image appears black. Any clues as to why?

Thanks again,
Will
