Subject: How to create a colour table in IDL?
Posted by atmospheric physics on Tue, 13 Jan 2015 10:32:19 GMT

Hello,

I have gone through the previous posts on this topic, but I could not understand how I can create a colour table in IDL. I am interested in using the colour table with only blue and red colours similar to XLOADCT: 70 - CB-RdBu - (as shown in http://www.exelisvis.de/docs/loadingdefaultcolortables.html). Can any one tell me how I can use the 'XLoadCT' colour table 70 with 'loadCT' command?

Look forward for a favourable response,

Thanking you,
With regards,
Madhavan
