No, the problem is that this file is not a GeoTiff file. There is no geographic information inside it. You will probably find the information you need to navigate the image elsewhere on this GOES site.

See these articles, for example:

[http://www.idlcoyote.com/map\\_tips/goesmap.html](http://www.idlcoyote.com/map_tips/goesmap.html)

[http://www.idlcoyote.com/map\\_tips/georeference.html](http://www.idlcoyote.com/map_tips/georeference.html)

I think it is also possible to find GOES images that *\*are\** GeoTiff images, but not from the place where you got yours. :-)

Cheers,

David
