Subject: Displaced errorbars on log-log scale with cgPlot

Hello,

I was using cgPlot to make the line plot on a log-log scale. I have included the y-axis errors around each data point. I have followed the Coyote Graphics Gallery - 'Error bar plot'. In my plot, I found that for some points the error bars are displaced and above the data point. I guess this is a bug in log-log scaling of error bars!!!

Thanks in advance,  
Madhavan
