Subject: Krig2d from point to image Posted by Juntao Yang on Thu, 29 Jan 2015 09:22:35 GMT View Forum Message <> Reply to Message

Hello everyone,

I have a problem about using the krig2d function.

I have several stations observations, e.g. snow depth.

How could I used the krig2d to transfer the point data to the snow depth map (like the arcgis)? Can someone give me a simple example, I confused about the example in the IDL HELP.

Thank you.

JT
