It is an IDL executable.

- > Did it mean an executable IDL script?

No, this is a real executable, just like what you and everyone else wants to build.

- > What will it cost?

More than you want to pay. :-)

RSI must do the embedding of IDL into your application. I hear this is "ridiculously expensive" to quote someone who wrote me about it just today. The general feeling is that if your are not also selling high-priced medical equipment or some other item in which you can bury the couple of hundred dollars cost, you will not be interested in this option.

(I'm making the numbers up, although I think I am not far off based on several recent conversations with disgruntled small-scale software developers. Check with your local IDL sales rep for the actual costs.)

Cheers,

David
