haha, true! I dislike numpy's syntax (who wants to write  
np.array([1,2,3]) for getting a [1,2,3] array???), and I dislike  
matplotlib even more.

However, after trying stuffs like Pandas, Scikit-Learn and Statsmodels,  
i've found the limitations of IDL. So a bridge will be welcome! Have you  
thought about making an official Jupyter (ex-iPython notebook)-Jupyter  
bridge? This would make IDL faster than Matlab in adopting the fancy  
"cool kids" stuffs.

Fabien
