Another update, it appears that it is not so much leaving the log location blank that does the trick, e.g.

Log Location =

But just specifying any non-valid location, e.g.

Log Location = qwertyuiop

results in no log files being generated, but no adverse behaviour in the Java Bridge, i.e. it seems to fail silently when trying to make a log file. So this does appear to be a workaround for the failure of

Bridge Logging = OFF

to do what it is supposed to do.
