> Thanks for the response... but I'm not quite sure I understand. To be a bit more concrete, I have a 2-d floating point array that I want to convert using this type of thing.   I can certainly write the data out using writeu, but I didn't know if there was a way to convert the data in IDL. I'm trying to pass the data into another program's stdin, and using byte or string or some such then that doesn't seem quite right...

Maybe this is what you are looking for:

   http://www.idlcoyote.com/code_tips/packfloat.php

Cheers,

David
