Newbie trying to run an ENVITask Process using IDL.

- 1.) Navigate to folder with GeoTiff files. (Files are 5band)
- 2.) Load a custom defined color table.
- 3.) Run Color Slice Classification on band1.
- 4.) Create a new output RGB Geotiff of the b1 color slice for every image selected.
- 5.) Run Color Slice Classification on band2
- 6.) Create a new output RGB Geotiff of the b2 color slice for every image selected.

Any guidance is appreciated since this is my first ever attempt at IDL.

Thanks.
