> % Variable is undefined: DEBUG.

You have not assigned a value to the variable DEBUG

```
IDL> help, a
A      UNDEFINED = <Undefined>
IDL> if a then print, 'Debugging!' else print, 'Not debugging.'
% Variable is undefined: A.
% Execution halted at: $MAIN$
```

Interestingly, !NULL does not behave the same way

```
IDL> b = !Null
IDL> help, b
B      UNDEFINED = !NULL
IDL> if b then print, 'Debugging!' else print, 'Not debugging.'
Not debugging.
```
