> % Variable is undefined: DEBUG.

You have not assigned a value to the variable DEBUG

IDL> help, a

A UNDEFINED = <Undefined>

IDL> if a then print, 'Debugging!' else print, 'Not debugging.'

% Variable is undefined: A.

% Execution halted at: \$MAIN\$

Interestingly, !NULL does not behave the same way

IDL> b = !Null

IDL> help, b

B UNDEFINED = !NULL

IDL> if b then print, 'Debugging!' else print, 'Not debugging.'

Not debugging.
