I don't see how you can get an error with the reform() command:

```
IDL> a = randomu(s, 200,200)  
IDL> print, size(a)  
      2      200      200      4      40000  
IDL> help, reform(a, 100l, 200l*2l)  
<Expression>  FLOAT   = Array[100, 400]
```

Cheers,
Helder
