I didn't understand the logic of this reform(a, 100l, 200l*2l).

If instead of A=[200,200] we have A=[216,216] and we want 120x(216x216) then this is written as reform(a, 120l, 216l*2l). Is that correct?

I am trying to understand how you end up with reform(a, 100l, 200l*2l). Because when I typed this
a = randomu(s, 216,216)

help, reform(a, 120l, 216l*2l,/overwrite)

I got the same error "REFORM: New subscripts must not change the number elements in A."
