Since you're the Value_locate guy, can it be used with 2d arrays? If so, how is monotonic defined in these cases? By using 1d indexes for a 2d array?
I don't have pc access at the moment to check myself, so I thought I would ask the guru ;-)
Sorry if the question has an obvious answer.
And in case of a 2d array, when does one end up with a monotonic 2d array (however this is defined)?

Thanks,
Helder
