Hello Everybody,

in our institute we are running a windows nt version of PV-WAVE 6.1. I
would like to know how to edit a program within PV-WAVE. Is there a
possibility of calling an editor like Emacs. Emacs is installed with the
ELISP files that came with PV-WAVE. I just don't know how to call it.
I also tried running WAVEDBG. Is it possible that this program does not
exist in the Windows NT version?
I appreciate any help from you.

Thanx a lot
haje
