---

I'm not entirely sure how best to phrase what I am trying to do but essentially I am trying to find a function that does something like this (but without the loop):

```
x = findgen(5)
y = x
for i = 0, 100 do y = [y, x]
```

So I then have an array [0,1,2,3,4,0,1,2,3,4...] 100 times. Is there a way of doing this without the loop?

Thanks!
