Subject: Create folder below certain file

Posted by Kai Heckel on Tue, 28 Apr 2015 11:58:24 GMT

Hello everyone!

I am currently working on an IDL project in which I want to find a specified file. Once I set the definition for my "IF"-statement, I want to create a new folder below the file...

So this is basically what it looks like:

```
IF (substring_month EQ '01') then begin
   FILE_MKDIR, '/January'
   FILE_MOVE, dirname[k], 'January'
ENDIF
```

This block is part of a "FOR"-loop, which defines "dirname" as the name of a folder.

I'd really appreciate your help!

Thanks everyone
