Thanks.   It turns out I get the error the first time I use any command requiring X-windows.

IDL> device,get_screen_size=xx
% Program caused arithmetic error: Floating illegal operand

so there must be something unusual about my X-Windows setup or screen (I use XQuartz 2.7.7 on Yosemite).   Anyway it is a minor problem (an error message that appears once) so I will live with it for now.
