---

This is my hw.isc:

```
-----  
print,"Hello world"  
exit  
-----
```

This is the output from running

```
ssh remote_server_name 'idl hw.isc'
```

once it stalls:

```
-----  
IDL Version 8.3 (linux x86_64 m64). (c) 2013, Exelis Visual Information Solutions, Inc.  
Installation number: [redacted]  
Licensed for use by: [redacted]  
-----
```

I also tried to ssh into the host server/headnode, but it results in the same problem.

Thanks,  
Flo.
