Is there any IDL_STARTUP file on the remote host?

What does "ssh remote_server_name 'cat hw.isc'" print?

If it is OK and the remote host is Linux, you can try

  ssh remote_server_name 'strace idl hw.isc'

This will print a zillion lines but you will see where IDL stalls at the end.

I can not guess your setup problem without access to the system. Show my previous working example to your IDL or system admin.

regards,
Lajos
