I am using the BYTSCL function to scale all values of my array and also because I want to be returned in byte type.

For the array A with max = 4745.34 and min = -726643. I used the BYTSCL(A, min=0., max=160.)

For the array B with max = 7.82217e+007 and min = -5.47788e+008 I tried to used only BYTSCL(B) but my image is not good. I guess that's because the max and min values are very large and small respectively?
