Hi All,

I am using cgboxplot.pro to identify outliers in my data. It is nice program that I see I have outliers in my data

Next step I would like to store my good data to an array and continue processing them.

Can anyone suggest me how I would solve my problem

Thank you in advance

Best regards

My data is two dimension wind data

wind = Array(number of days, pressure levels)

e.g wind= Array(31, 17)
