Warning: new IDL user here. I'm trying to plot points on a map. I've got a lat variable, and a long variable.

In the command line window I type:

```
lat=btstruc.latitude  
lon=btstruc.longitude  
map_set  
map_continents  
oplot, lon, lat
```

I get no error messages, but no map pops up at all. I'm not sure why this is! Any advice?
