This isn't really the right forum for this question. PLOT_MAP is not an native IDL routine -- it is written by an IDL user. From google, it looks like it comes from the Solar Software Group (SSW). You should write them for help if their documentation doesn't suffice.

http://hesperia.gsfc.nasa.gov/rhessidatcenter/complementary_data/maps/

But from quick look at plot_map_index.pro, it looks like you get this message when your "map" variable is not defined. --Wayne
