
Subject: IDLWAVE and &\$ blocks

Hi all,

Does anyone know how to get emacs to add/remove a bunch of '&\$' at the end of a block of code, like C-c+; for commenting?

Also, how to force indentation to ignore said '&\$' and continue to indent code properly?

I tried looking through the docs, but I found nothing. Possibly cos I didn't search for the right terms...

Thanks,
G
