
Subject: Setting the zoom_base property in IDLgrWindow

Dear all,

I feel so stupid, this is a very basic question... but shouldn't the line below work?

```
oWin = obj_new('IDLgrWindow', zoom_base=1.25D)
```

I get the following error:

```
% OBJ_NEW: Illegal keyword value for ZOOM_BASE.  
% Execution halted at: $MAIN$
```

I get the same error when using SetProperty with an IDLgrWindow object. The manual mentions that this property is available for the init and set methods and that the parameter should be a double precision number...

Nuno
