Hallo

I have an array profile=fltarr(500,6)

I read values into this array in a for loop

for k=0,5 do begin

  for i=0,499 do begin

    profile(i,k) = .....

  endfor

endfor

while I'm in the loop, there are values in the array profile but as soon as I exit the loop the whole array is empty?

How can this be?
