Hallo

I have an array `profile=fltarr(500,6)`

I read values into this array in a for loop

for `k=0,5` do begin

 for `i=0,499` do begin

`profile(i,k) = .....`

 endfor

endfor

while I'm in the loop, there are values in the array `profile` but as soon as I exit the loop the whole array is empty?

How can this be?
