---

Example 1.

```
a = findgen(4)
a[1] = !values.f_nan
print, a
 0.000000      NaN    2.000000    3.000000

print, interpolate(a, [0, 1, 2, 3])
  NaN      NaN    2.000000    3.000000
```

Example 2.

```
a = transpose(a)
print, interpolate(a, 0, [0, 1, 2, 3], /grid)
  0.000000
    NaN
  2.000000
  3.000000
```

different result~!!

is this right output?
