Example 1.

```
a = findgen(4)
a[1] = !values.f_nan
print, a
      0.000000      NaN      2.00000      3.00000

print, interpolate(a, [0, 1, 2, 3])
      NaN      NaN      2.00000      3.00000
```

Example 2.

```
a = transpose(a)
print, interpolate(a, 0, [0, 1, 2, 3], /grid)
      0.000000
      NaN
      2.00000
      3.00000
```

different result~!!
is this right output?
