
Subject: putting .txt files in a structure

So I've created a structure which has a bunch of arrays (both string, and integer). I handwrote a file called readme.txt which explains all the variables in the structure. I can't get the file itself to become part of the structure.

Part of the code looks like this (not the actual code, but similar..):

```
btstruc={mm=momentmm,$  
          ros=btstruc.ros, $  
          readme=readme.txt}
```

Everything works, except the text file!

Any ideas?
