hello all,

I am attempting to call a Snappy frame grabber. The snappy comes with a callable dll, and for 200\$ you cant beat it for price (including the software). The information file lists a variety of commands all of them and they all look like

ISnappy::Abort

or the likes of

we have tried

temp = call_external('snappy.dll', 'ISnappy::Abort()')

and any combo. of that with no results.

any help?

thanks

jordan
