Your error is probably coming from referencing A when you should be referencing *A_ptr, which now contains the values of A. Here is an example of how to do this:

```
a = findgen(216,216)
b = 1.1*findgen(216,216)
A_ptr = ptr_new(a,/no_copy)
diff = total (*A_ptr - b)
print, diff
```
