Hi

I want to create two oval shapes where the enclosed pixels have fixed values. I tried the following but are rectangles, as expected of course.

```
Im = fltarr(300,300)
```

```
A[19:68,40:115] = 2.
```

```
A[40:55,62:82] = 1.
```

Can anyone help with this? Instead of rectangles creating oval shapes with fixed values.
