Hi Fabien,

in the meanwhile, I'm realizing that this may be a very different error. The error I get in IDL is:

% PYTHON_CALLMETHOD: Exception: 'crosscheck' is an invalid keyword argument for this function.

I'm using BFMatcher of opencv (ver 3.0) and the keyword crosscheck is defined as crossCheck with capital "C" and the error it throws is of an invalid keyword...

I just found a dirty workaround:

```
Python.Run, 'import cv2'
```

```
Python.Run, 'bf = cv2.BFMatcher(cv2.NORM_HAMMING, crossCheck=True)'
```

```
bf = Python.bf
```

and it seems to work.

Still, the question holds: can one call methods with keywords with capital letters?

Cheers,
Helder
