Dear ALL,

I just installed IDL 8.5 in CentOS and am testing IDL-Python bridge. When I run examples from the documentation, I got an error below:

Command:

```
plt = Python.Import('matplotlib.pyplot')
```

Error:

```
% PYTHON_IMPORT: Exception: No module named PySide.
```

```
% Execution halted at: $MAIN$
```

I don't have problems running "ran = Python.Import('numpy.random')".

I don't have problem running in ipython "import matplotlib.pyplot".

Does anyone have some clue? Thanks!
