Hallo

If I have a set of data:

$x = 0, 1, 2, 3, 4, 5$  and  $y = 101, 245, 366, 410, 525$

how do I use the interpolate function to interpolate the y values for  $x = 0.5, 1.5, 2.5$  etc?

Thanks!
