Folks,

I notice that when I put axes on a surface plot that the
X axis title appears to almost touch the numbers that
label the axis. The Y and Z axis titles are much
further away from their respective numbers. You
can see this if you look at the surface plot
in the XSURFACE program at:

  http://www.dfanning.com/documents/programs.html

Does anyone else notice this, or is this a windows
problem. I'm running WindowsNT 4.0.

BTW, this appears to not be an optical illusion
or an accident of perspective, because it holds
true under any rotation.

Cheers,

David
