> Aha! Yes, it must have been setting background=cgcolor('white') and color=cgcolor('black') that corrupted the colour table. Putting cgloatct after the call to cgplot has fixed it. Doh!

Yes, you are getting into trouble because you are only half committed to
Coyote Graphics. Commit fully to decomposed color and to Coyote Graphics
and your color problems will disappear back into the 20th century where
they belong. :-)

Cheers,

David
