Does anyone know of the following:

 The whereabouts of the Astromical library or routines for
dealing with FITS files in IDL?

 The same for a GIF file reader/writer in IDL.

 The proper byte order for sending 16 bit binary image (or other
data) from a Sun to a PC.  (I believe I have the answer already on this:
i.e. using BYTEORDER,X,/SSWAP works OK).

Thanks,
Phil Turet turet@salty.nw.saic.com
