Hello!

Currently I have problems, reading statistical values from a data table.

My table looks something like this:

```
param1 param2 param3 param4 param5 param6 ....  
1990  xy  xy  xy  xy  xy  xy  
1991  xy  xy  xy  xy  xy  xy  
1992  xy  xy  xy  xy  xy  xy  
1993  xy  xy  xy  xy  xy  xy  
1994  xy  xy  xy  xy  xy  xy  
1995  xy  xy  xy  xy  xy  xy  
1996  xy  xy  xy  xy  xy  xy  
1997  xy  xy  xy  xy  xy  xy  
1998  xy  xy  xy  xy  xy  xy  
.   xy  xy  xy  xy  xy  xy
```

I would like to calculate some statistical measures for this structure.....but somehow I can't find a suitable way to read in the data...

I am looking forward to your suggestions.

Thanks in advance!

Cheers!
