Hello!

Currently I have problems, reading statistical values from a data table.

My table looks something like this:

```
    param1 param2 param3 param4 param5 param6 ....
1990  xy    xy    xy    xy    xy    xy
1991  xy    xy    xy    xy    xy    xy
1992  xy    xy    xy    xy    xy    xy
1993  xy    xy    xy    xy    xy    xy
1994  xy    xy    xy    xy    xy    xy
1995  xy    xy    xy    xy    xy    xy
1996  xy    xy    xy    xy    xy    xy
1997  xy    xy    xy    xy    xy    xy
1998  xy    xy    xy    xy    xy    xy
.    xy    xy    xy    xy    xy    xy
.    xy    xy    xy    xy    xy    xy
.    xy    xy    xy    xy    xy    xy
.    xy    xy    xy    xy    xy    xy
.    xy    xy    xy    xy    xy    xy
```

I would like to calculate some statistical measures for this structure.....but somehow I can't find a suitable way to read in the data...

I am looking forward to your suggestions.

Thanks in advance!

Cheers!
