
Subject: 3-D scatter plot routines?

I have many points of the form (x,y,z) which I would like to display using IDL. Ultimately, I would like to fit a surface to these data, but because they do not conform to any grid, I don't think I can use the SFIT procedure (which requires a 2-D array of data to fit.)

Do I have any other options, using IDL 3.5?

If there are any suggestions, could they be Email'ed to me, as well as posted?

Thanks.
