Hello I have a problem and I am trying to see if IDL can solve this

I have an initial date

08/05/2012 05:14:39

and then my data is arrange in days and fractions of days

DAY

9.77013 -> meaning 9.77013 days after the initial date

9.77037

9.77060

9.77083

9.77106

9.77130

9.77153

9.77175

9.77199

9.77222

9.77245

is there a way that IDL can help me to convert each point to real date and time given the start date and time ?

Thanks
