> I want to create a program that writes the data to the image, but it does not go well.
> What will you do?
> Please tell me how to write the data to the image.
> Array of image is (3, 3547, 3431).

Not really enough information to answer this, but something like this might work if your data are
floating point:

write_image, 'your_data.png', 'PNG', bytscl(array)

or

write_image, 'your_data_db.png', 'PNG', bytscl(alog(array))

Of course, there are many other formats you could use, see the documentation:

http://www.exelisvis.com/docs/WRITE_IMAGE.html
