This doesn't help the OP, but it's still an interesting (and short) read:
  https://en.wikipedia.org/wiki/AddressSanitizer

In particular the sentence:
"On average, the [AddressSantizer] instrumentation increases processing
time by about 73% and memory usage by 340%."

Eesh. Sounds like something you'd want to turn off for number crunching
with IDL....

cheers,

paulv
